EDUCATION

RV Institute of Technology and Management 2024 – 2028
Bachelor of Engineering in Computer Science and Engineering *CGPA: 8.70/10.00*

TECHNICAL SKILLS

Languages: Java, Python, C, JavaScript
Core CS: Data Structures & Algorithms, Object-Oriented Programming, DBMS, SQL
Web Development: React.js, Flask, REST APIs, HTML, CSS
AI/ML: LLMs, NLP, NumPy, Pandas, Scikit-learn
Databases: MySQL, Neo4j
Tools: Git, GitHub, VS Code
Problem Solving: 100+ problems across LeetCode, GeeksforGeeks, Codewars, and HackerRank

PROJECTS

Agentic Commerce – Text-to-Cypher Assistant for E-Commerce Product Discovery *Python, LLM, Neo4j, Cypher, NLP*

- Built a natural-language product discovery assistant that converts shopping queries into executable Cypher queries for a Neo4j knowledge graph.
- Designed an intent-processing pipeline to extract product constraints including category, price, battery requirements, ratings, and feature preferences from user queries.
- Created and populated a Neo4j product knowledge graph containing 45+ products and integrated query generation with graph-based product retrieval.

Code Judge – Online Coding Platform *React.js, JavaScript, HTML, CSS, MySQL*

- Developed a coding practice platform for problem discovery, submissions, and progress tracking using React.js and MySQL.
- Implemented authentication, difficulty-based filtering, coding-language selection, problem-of-the-day, and progress tracking features.
- Designed relational data models for users, problems, and submissions to support structured coding activity.

Smart Resume Analyzer – ATS + AI *Python, Flask, HTML, CSS, JavaScript*

- Built a Flask-based application that analyzes resumes against job descriptions to identify relevant skills, keywords, and potential gaps.
- Implemented resume–job description matching and automated scoring to evaluate resume alignment with target roles.
- Developed an interactive workflow for resume analysis, feedback generation, and skill-gap identification.

News Aggregator System *Python, Flask, BeautifulSoup, HTML, CSS, JavaScript*

- Developed a web application that aggregates and categorizes news articles using RSS feeds and web scraping.
- Implemented keyword search and category-based filtering for structured article discovery.
- Built a Flask backend to collect, process, organize, and dynamically serve article data.

Assistive GenAI Tools for Neurodivergent Minds – Hackathon Project *GenAI, UI/UX*

- Designed an AI-assisted system for personalized cognitive support, task decomposition, and emotion-aware assistance.
- Presented the solution during the Kodikon 24-hour innovation challenge, translating an accessibility-focused problem into practical AI-assisted workflows.

ACHIEVEMENTS & ACTIVITIES

- Participated in Kodikon Hackathon; presented "Assistive GenAI Tools Empowering Neurodivergent Minds."
- Participated in Reverse Coding X at Shaastra 2026, IIT Madras.
- Participated in Code Clash at Elan & nVision 2026, IIT Hyderabad.
- Participated in GenAI Buildathon Sprint 2025 focused on AI innovation challenges.
- Attended DSA and Computing Fundamentals workshops conducted by RV Institute of Technology and Management.
